

# BLUE'LOG XM / XC

## DESCRIPTION OF FUNCTIONS

Data loggers of the blue'Log X series record all relevant system data, provide various interfaces and functionality for power plant control and thus enable grid-compliant feed-in for PV systems. For the monitoring portal VCOM (Virtual Control Room), the blue'Log X series serves as the heart of on-site monitoring.

The blue'Log X series can get ordered with the range of functions of X-Monitoring (blue'Log XM) or X-Control (blue'Log XC).

## SOFTWARE FEATURES

	<i>X-MONITORING</i>	<i>X-CONTROL</i>
Monitoring	max. 100 devices*	max. 30 devices*
Power Control (Active and Reactive Power Control)	No (Slave function**)	Yes

\*number of devices

Devices affects all except status via multi / digital inputs

\*\*Slave function

*For systems with Power Control and more than one data logger, the meteocontrol Master / Slave functionality is used. The blue'Log XM can get configured as a slave and thus transmits the Power Control setpoints to the connected inverters.*
